1. The first step in the process is to identify the problem or issue that needs to be addressed. This involves gathering information and understanding the context of the problem.

1. **Identify the problem.** The first step is to identify the problem. This involves understanding the situation, the people involved, and the goals that need to be achieved.

1. If the same rule under 3.5.1.1 is being used for any other than the first amendment only, a disclaimer enclosed with the RFP will be sent so that the potential bidders are aware of this and understand that the RFP will be sent to the bidders only once and no further amendments will be made to the RFP.

is then substituted in the OLS equation (1) and regressed against the variables in (2) to the following:

Figure 1

Based on the data in the low and high categories, it is expected that the average number of children per woman in the low category is smaller than the average number of children per woman in the high category. Therefore, the null hypothesis is:

Figure 1. The effect of the number of trials on the mean number of correct responses for the 100 trials condition. The number of correct responses was significantly higher than the number of incorrect responses for the 100 trials condition.

The data was analysed using a two-way analysis of variance (ANOVA) to compare the effect of gender and age on the dependent variables.
